

#### CHARACTERISTICS:

**MEGAMICRO** is a formulation based on chelated trace elements: Boron (B), Copper (Cu), Iron (Fe), Manganese (Mn), Molybdenum (Mo) and Zinc (Zn). It is a specific product studied to prevent and treat all micronutrient deficiencies. **MEGAMICRO** is particularly suitable for fruit growing and horticulture but it is also widely used in floriculture, both by foliar and root application (fertigation).

Thanks to its particular formulation, it makes treated plants more resistant not only to adverse climatic events and to pest diseases, but also to situations of poor water supply. Its rapid absorption is an essential characteristic to improve the lignification of the young parts of the plant, promoting also the development of its root system. By using this product, you can observe very positive effects as regards flowers and seeds formation as well as in shelf-life and size of fruits.

#### INSTRUCTIONS FOR USE AND RATES:

Generally, **MEGAMICRO** is used by fertigation at a rate of 5-10 kg/ha and by foliar application at a rate of 100-250 g/100 lt. It is suitable for all kinds of trees (olive, apple, pear, citrus fruit, stone fruit, grapevine), vegetables (strawberry, solanaceae, cucurbits, etc.) and extensive crops. This product is also recommended for flowers (2-3 applications, as required).
