

**CHARACTERISTICS:**

Thanks to its specific formulation, when combined with products based on Phosphorous, **ZINCO** acts as stimulator in young tissues reproduction. Zinc is particularly useful during rooting (leading to the formation of a dense and rich root system) and during enzymatic synthesis processes, regarding proteins' metabolism and Nitrogen synthesis.

Zinc is an essential element, consequently involved in the tryptophan synthesis (precursor of auxins). Symptoms of Zinc deficiency may manifest with the following phenomena: small-size fruits, frequent fruit drop, slowdown in plant growth and shortening of internodes.

**INSTRUCTIONS FOR USE AND RATES:**

**ZINCO** is particularly suitable for fertigation (20-50 kg/ha) and foliar applications (120-280 gr/100 lt). It is indicated for all kinds of tree cultivations (olive, apple, pear, citrus fruit, stone fruit, grapevine), vegetables (strawberry, solanaceae, cucurbits, etc.) and extensive crops. This product is also recommended on flowers (2-3 applications, as required).
