

CHARACTERISTICS:

The presence of Alginate is essential for the bio-stimulating role of algae, because it acts as a carrier for all the other elements that are contained in or combined with. The high presence of carbohydrates, amino acids and vitamins (naturally present in algae) has a stimulating effect on plant metabolism, which improves quality and quantity of yields. In particular, it entails:

- Better rooting and greater vegetative development;
- Resistance to sudden temperature drops;
- Higher hydration;
- Better fruit setting;
- Better performance of nutrients inputs;
- Increase in size and better colour of fruits;
- Higher sugar content.

Furthermore, the repeated use of the product leads to an improvement in the capacity of the plant to react against stress due to biotic and abiotic factors.

WARNINGS:

ALGAVIS can be mixed with the most common pesticides and fertilizers on the market.
Avoid mixtures with products that contain glycols.

COMPOSITION	FORMULATION	CLASSIFICATION	PRE-HARVEST INTERVAL	PACKAGING
Organic carbon (C) of biological origin: 4% Mannitol: 0.7 g/lit	Dense liquid			5 lt tank Boxes of 4 units

Crop and Rates	Time of application
Fruit crops 200-300 ml/100 lt	Every 15 days from pre-flowering to the end of fruit growing
Grapevine 200-300 ml/100 lt	Every 15 days from pre-flowering to veraison
<i>VEGETABLES (field and greenhouse)</i> Potato, Asparagus, Tomato, Green bean, Lettuce, Radicchio, Melon, Watermelon, Eggplant, Pea, Pepper 200-300 ml/100 lt	From immediately after transplantation (in order to stimulate rooting) onwards
Flowers, nurseries and golf courses 200-300 ml/100 lt	Every 15 days, depending on plant development

Before using the product, carefully read all the instructions on the packaging label.
