

**CHARACTERISTICS:**

DOMINUS is a nitrogen organic fertilizer that, in its composition, also contains: potassium compounds, phosphorus, iron and calcium as well as vegetable substances that stimulate the defence system of the plant against biotic and abiotic attacks.

DOMINUS has been specifically designed to reduce the stress of the plant during its growing cycle. DOMINUS improves plant defence system, stimulating natural self-defences. DOMINUS can be used both in foliar treatments and in fertigation. Its use is allowed in organic farming.

**RATES AND INSTRUCTIONS FOR USE:**

DOMINUS has been designed to be used both in foliar treatments and in fertigation.

Foliar treatments: 300-500 g/100 lt of water

Fertigation: 2-8 kg/ha

In case of mixtures with other products (plant protection products, fertilizers, strengtheners, etc.) it is recommended to carry out a small compatibility test.

**WARNINGS:**

At low temperatures, DOMINUS tends to have a thicker texture, without consequences for its quality characteristics. It is recommended to store DOMINUS above 20°C and to shake it well before use.

COMPOSITION	FORMULATION	CLASSIFICATION	PRE-HARVEST INTERVAL	PACKAGING
Organic Nitrogen (N) 3% Soluble organic Nitrogen (N) 3% Organic Carbon (C) of biological origin 10%	Liquid			1 kg bottle Boxes of 20 pieces 5 kg tank Boxes of 4 pieces

Before using the product, carefully read all the instructions on the packaging label
