

CHARACTERISTICS:

ROLL GIALLO is a chromotropic action trap effective for the capture of many harmful insects such as whiteflies, aphids, diptera, leaf miners, leafhoppers, stink bugs, etc. ROLL GIALLO consists of a yellow plastic tape (chromotropic action), 30 cm wide and 100 m long, covered with highly adhesive entomological glue, to be used in open fields or inside greenhouses. The large sized glued surface and the yellow color of the tape (chromotropic action) allow to catch a very high number of adults, drastically reducing attacks.

HOW TO INSTALL IT:

Open field: ROLL GIALLO should be unrolled at 0.8 to 1.5 meters from the ground and firmly fixed on natural supports or with poles placed at the limits of the parcel.

Greenhouse: install on the perimeter of the greenhouse; ROLL GIALLO can also be used between crop rows. In this case, arrange evenly, for sufficient lengths and secure firmly between the supports or on appropriate bases.

Storage conditions: Store in a cool and dry place. If stored correctly ROLL GIALLO can be stored for about a year.

IMPORTANT: ROLL GIALLO can be used effectively, in combination with the specific pheromone, for the construction of traps for the capture of Brown marmorated stink bug (TOTEM traps).
